ACCESS CONTROL

COMFORTABLE INTEGRATED
ACCESS WITH REAL-TIME
ACCESS HISTORY ON YOUR
SMARTPHONE, TABLET AND PC.

Everyone puts safety first. Our house is our home, and we want to be certain that only those we fully trust can enter it. With TELETASK access control, this is guaranteed. And with TELETASK, that peace of mind comes with several other comfort benefits.

SECURITY

A unique, secure card, tag or wristband grants access to your home or building. There is no risk of your card/tag being copied, unlike with a traditional key or a magnetic access card. Nor can a code simply be passed on, as with a numeric keypad. Thanks to the digital connection of the card reader(s), there is no simple electrical contact (from the street) that can be easily sabotaged. The TELETASK proximity reader is extremely easy to use and is one of the most reliable, highly secure and GDPR compliant readers available on the market.

INTEGRATION

Thanks to integration with the TELETASK system, arriving home can do more than simply unlock or open a door, gate or fence: it can also activate other useful functions such as adjusting temperature settings, enabling the water supply, controlling lighting when it is dark, etc. Your personal set of functionalities will be activated automatically.

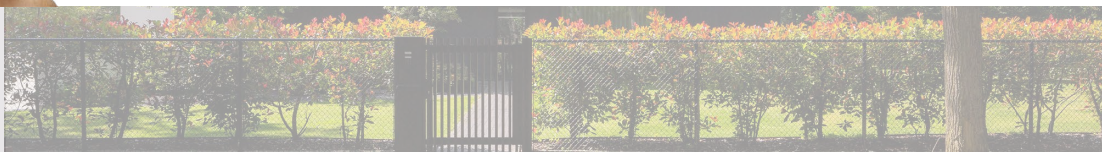

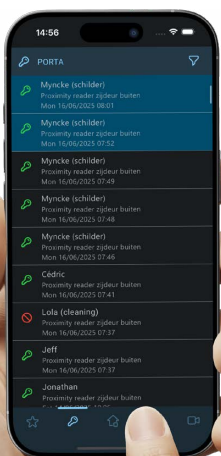

Each access card is personal and provides tailored access to your home. The cleaner can enter while you are away, but not when you are at home, because then he must ring the bell. Privacy comes first, and with the TELETASK system, it is maximised. Access can also be restricted to specific days or times of day. For example, the gardener can only open the street gate and the garden shed, but not the private entrances to the house. He will also only have running water and electricity in the garden for a limited number of hours. Your TELETASK system handles this. Electricity and water supply are then automatically switched off in the evening to prevent unwanted use. You just don't need to think about it. In this way, access control also delivers safety, energy management and comfort with complete peace of mind.

THE PORTA APP FOR ACCESS LOGGING AND STORAGE

Optionally, you can purchase the ATMOS app with built-in PORTA software (from hardware version G3 on). All access actions are logged in real-time. In real-time, you can view these access logs on your Android and iPhone smartphones, tablet and PC. The PORTA app gives you a complete overview: when the household staff/gardener arrived, whether the children are safely home, whether grandma arrived safely... You can always check on your

History of access on
your smartphone

mobile, wherever you are on the globe.

Would you prefer to receive an overview of access actions by e-mail? This is also available in your TELETASK system. You can also import the received data into an Excel file and continue working with it.

As an employer, you can use the system for time registration. The TELETASK access control system is GDPR compliant.

Belgium: From January 1, 2027, working time registration is mandatory for all employers. The TELETASK system is also the perfect solution here and the generated logfile can be used as proof of working time registration. The incoming and outgoing time stamp is logged per every individual person and sent on regular bases, via secure e-mail, to the company or HRM management. A REMOTE SERVICES subscription is needed, but it has a low yearly cost.

Privacy: For privacy reasons, logging of family members' access actions is disabled by default. However, if you wish, the PORTA app can be configured to log specific cards.

Important: Local privacy legislation must be verified by the installer, so that the individual configuration complies with local (national) regulations. The TELETASK access control system complies with common GDPR guidelines. User data is only accessible via a secure TTcloud connection and secure e-mails.

FUNCTIONALITIES

- Up to 500 unique cards and tags in one installation. Groups (parents, children,

family, staff, management, technical service team,...) can be created for ease of use.

- Uniquely configurable functions for each individual card or tag.
- Each individual access (and denied access) is stored and can be visualised (depending on the defined configuration).
- System memory (in the central unit): up to 1000 log actions stored on a FIFO basis. If desired, the file with the access events can be sent automatically by e-mail to prevent data loss (CSV file; can be imported into, for example, MS Excel). An e-mail can be sent on predefined times /day, / week, /month or when (almost memory-full status) occurs..
- Personalised configuration with the USERSOFT menu (part of PROSOFT 5 Suite)
- Optional PORTA app (part of the ATMOS app) for visualisation on Android, Apple iOS and Windows PC devices. Tip: with the PORTA app, you can also get access directly from your mobile device, without a card reader.
- Management of all types of tags and their access can be done by the end user in TTcloud. If permitted by the owner, the system integrator can also manage this remotely, provided he has a REMOTE SERVICES subscription. This means he does not need to visit the customer for changes, providing a highly efficient service.

CARD READER DIMENSIONS

- TDS12142PN: 115 W x 115 H x 15 D (mm)
- TDS12142GL/GB/GW: 115 x 115 x 18 (mm)

CARD READER INSTALLATION

Mounting on a flat indoor or outdoor wall using a standard wall box or opening. Note: cannot be installed on a plain metal surface (magnetic interference can block the presence signal). A 2cm stand-off is advised in such cases. The TELETASK proximity reader is particularly easy to install: only an AUTOBUS connection is required for full integration with your TELETASK system. The PORTA app can be downloaded via the app store depending on the operating system, or via www.teletask.be. PORTA needs a paid ATMOS subscription to be obtained via your system integrator.
