

The Power of Moods

What is a mood?

A mood is a single touch command that sets multiple functions in the home exactly the way the user wants them. Instead of controlling lights, curtains and other features one by one, TELETASK can recall a complete scene instantly.

This makes the installation feel smarter, more luxurious and far more personal.

One touch.

Many actions.

- Lighting levels
- Curtains / blinds
- Comfort settings
- Selected devices

Why moods matter

- Creates an immediate premium experience
- Reduces repeated button presses
- Makes the system intuitive for all family members
- Adds consistency to daily routines

Typical mood examples

- Welcome Home
- Movie Time
- Dinner
- Good Night
- Away / All Off

Why users love them

- Fast and effortless control
- A personalised living experience
- Cleaner interface design
- Better use of the automation investment

Example: “Good Night” mood

- Turns off selected lights
- Leaves only essential pathway lights on if required
- Closes curtains or blinds
- Switches off non-essential connected devices
- Prepares the house for a secure and comfortable night setting

Design note

A well-planned mood strategy makes the home feel thoughtful and effortless - exactly what premium automation should deliver.

With TELETASK, moods transform automation from control into experience.

Ideal for luxury homes, show flats and refined daily living.
